Brian J. Moloney  
President & CEO Imaginary Landscape, LLC  
Web Design | Development | Strategy

Hello Ms. Moloney

I am writing in response to the software engineer opportunity posted on the job board of Imaginary Landscape. My name is Dejun Qi, currently working in American Family Insurance as a full stack web developer intern. My jobs focus on: 1) developing RESTfull web service (using Django REST framework) for housing data extraction via simple http-based URI call, 2) developing web scraping program using python to collect useful data for my team.

I have hands on experience in developing web app using Django and web service using the Django REST framework. Except my work project, I also built a fully functional customer blog system using Django. With the Django “models” module, I designed the post and post comments workflow in such a way that user can comment on a post and reply to any specific comment. Due to my job’s requirements I have to learning the Django REST framework. So for the sake of practice, I am using it to build RESTful services for the blog application.

Python is definitely my favorite language due to the beauty of its syntax, Django is a very powerful framework that I am using very often. Dare not to say I am an expert, but I am improving my skill and understand of them every single day.

Besides, I have some experience with Angular.js and Node.js and would love to learn more about them. Most of the time I used Ubuntu Linux and Mac, so that I am very comfortable working in Linux environment. Having reviewed the job details, I do believe that I am a good fit for this position. Please see my resume for more detail, and feel free to contact me if you have any question. Looking forward to hearing you back.

Sincerely

Dejun Qi
